

Qdata® Follicular Lymphoma is an exclusive dataset providing clear insight into treatment decisions, lines of therapy, and patient outcomes in real-world clinical practice.

Verana Health® powers oncology research with high-quality real-world data sourced from curated electronic health records and linked data sources at leading cancer centers across the US. Built specifically for cancer research, Verana Health's oncology datasets and analytics deliver clinically rich insights across tumor types and lines of therapy, supporting evidence generation at every stage of the drug development and commercialization lifecycle.

Abstracted Data

ABSTRACTED	ACCESSIBLE	ABSTRACTED + ACCESSIBLE
10,880	11,630+	22,510+

Potential patients as of Q2 2026

Note: Abstracted data is available for immediate delivery. Accessible data requires additional curation.

Clinician-led and AI-enabled oncology data platform

Verana Health securely ingests, links, and curates raw oncology care data from point-of-care clinical encounters. Purpose-built, fit-for-purpose data is designed to support rigorous research and confident decision-making across the oncology lifecycle.

Abstracted Data Summary:

DATA SET QUALITY

7.3 yrs	Average length of follow-up	96%	Patients with race data
13.4	Performance statuses on avg. per patient	94%	Patients with ethnicity data
79%	Patients with performance Status	83%	Patients with outcome data

TREATMENT HIGHLIGHTS

Anti-CD20 and Alkylating Agent in the same LOT	5,984
Obinutuzumab	723

FOLLICULAR LYMPHOMA GRADES

Grade 1-2	7,699
Grade 3	1,929

4,075 Newly Diagnosed

Relapse/
Refractory **4,361**

About Verana Health

Verana Health, Inc.® is a digital health company revolutionizing patient care and clinical research by utilizing physician expertise and artificial intelligence to unlock the true potential of real-world data. With exclusive access to the world's largest patient data sources in oncology, ophthalmology, neurology, and urology. Verana Health is powering real-world evidence generation. Clinicians utilize these insights to improve the quality of care and quality of life for patients, and life sciences companies rely on the insights to accelerate the development of new therapies.
