

Qdata® Retinitis Pigmentosa (RP) is a novel real-world dataset that can accurately analyze patients with retinitis pigmentosa and associated clinical outcomes through unstructured clinical notes.

Verana Health® delivers meaningful insights by ingesting, curating and analyzing real-world data from the American Academy of Ophthalmology IRIS® Registry (Intelligent Research in Sight) and linking it with other data sources such as claims and ophthalmic images.

✔ **Exclusive Coverage of this Patient Population**

Only found here

✔ **Accurately Analyze Patients with Retinitis Pigmentosa**

Using clinical notes and ophthalmic images

✔ **Detailed Understanding of Patient Outcomes**

Visual acuity and central subfield thickness curated from semi-structured fields

Total in Qdata Retinitis Pigmentosa:

78K+

De-identified patients with retinitis pigmentosa confirmed from notes*

4.3 Years

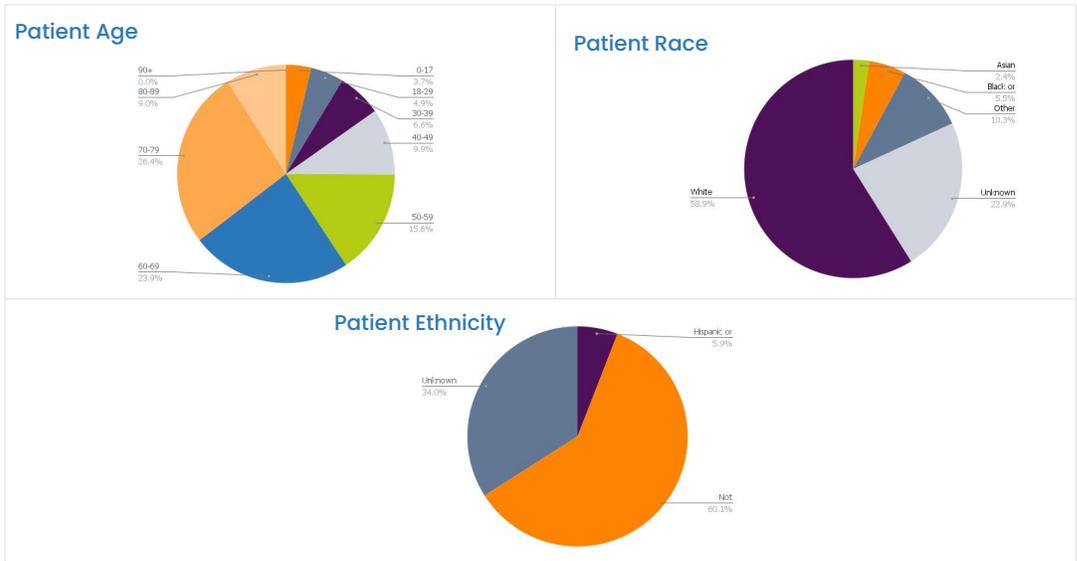

Median follow up time

*Defined as RP patients confirmed from notes with a structured ICD code or RP-related keyword, between January 2013 and July 2025

Key Variables

Variable	Details
Visual Acuity (VA)	Visual acuity (VA) Measures how sharp your vision is at a distance; usually tested by reading an eye chart, and is an outcome measure from EHR semi-structured fields.
Central Subfield Thickness (CST)	Measures the thickness of the central part of the retina, typically determined using optical coherence tomographic imaging. CST is an outcome measure from EHR semi-structured fields.

About Verana Health

Verana Health® is revolutionizing patient care and clinical research by unlocking the potential of real-world data. Verana Health has an exclusive real-world data network of 90 million de-identified patients from more than 20,000 clinicians, stemming from its exclusive data partnerships with leading medical societies. Verana Health harnesses deep expertise, secure advanced technology, and direct access to exclusive, near real-time data sources to deliver actionable quality insights that help companies make sense of the data.
